Name of Journal: *World Journal of Cardiology*

ESPS Manuscript NO: 28630

Manuscript Type: Review

Reply to Reviewer # 225335

The authors express their gratitude for the comments of the reviewer. Our response to the concerns and suggestions raised is as follows:

- 1) Overall, a well-written review of the association between vitamin D deficiency and AML. Only one minor comment: Figure 1 seems to come from ref 12. Did authors get permission to reuse it?**

We have addressed this issue and we have now provided permissions to reproduce such a figure. Thanks.

Reply to Reviewer # 227531

We thank the Reviewer for his/her criticisms. Our response to the concerns and suggestions raised is as follows:

- 1) Well-written article on the role of Vit D in patients with coronary artery disease, particularly on the prevention of myocardial infarction, done by researchers with recognized experience in this field I think that studies with negative results, if any, should be also reported.**

We thank the Reviewer for her/his suggestion. Of note, negative results mainly deal with interventional trials and a brief discussion on these data has been added to the text. Thanks.
