

**Supplementary Figure 1 Basal cytokine production pre- and post-anti-tumor necrosis factor therapy.** Basal pro-inflammatory (TNF, IL-1 $\beta$ , IL-6), immune-regulatory (IL-10), Th1 (IL-12, IFN $\gamma$ ) and Th2 (IL-9, IL-13, IL-17A) cytokine expression was assessed in PBMCs isolated from CD and UC patients pre- and 3 months after commencing anti-TNF therapy ( $n = 18$ ). Results were expressed as cytokine concentration (pg/mL), the grey lines connect matched patient data (pre- and post-anti-TNF therapy), and the solid black lines represents the population median cytokine production. CD: Crohn's disease; UC: Ulcerative colitis; TNF: Tumor necrosis factor; IL: Interleukin.

**Supplementary Figure 2 Stimulated tumor necrosis factor production pre- and post-anti-tumor necrosis factor therapy.** Stimulated TNF expression was assessed in PBMCs isolated from UC patients pre- and 3 months after commencing anti-TNF therapy ( $n = 18$ ). Results were expressed as cytokine concentration (pg/mL), the grey lines connect matched patient data (pre- and post-anti-TNF therapy), and the solid black lines represent the median TNF production. The  $P$  values represent statistical significance of  $< 0.05$  between pre- and post-anti-TNF groups as denoted. UC: Ulcerative colitis; PBMC: Peripheral blood mononuclear cells; TLR: Toll-like receptor; TNF: Tumor necrosis factor.

**Supplementary Table 1 Antibody and isotype control panels for peripheral blood mononuclear cells characterisation**
