Manuscript Type: Original Article

REVIEWER 1

Reviewer's Comment 1

This is a nice study and well done. Several suggestions: 1. Please state that most T1DM studies are in Caucasians. This study confirms the findings in Africans. 2. You may want to state that newer work in T1DM shows renal disease is confined to a subset of individuals and that renal disease begins very early in T1DM. Your results confirm this after only 4 yrs of T1DM

Authors' Response 1

Thank you for these suggestions. Corrections have been made accordingly.

REVIEWER 2

Reviewer's Comment 1

The albuminuria disease seems to be a useful target for a review publication and could potentially provide a comprehensive discussion of available choices. The task is quite difficult due to variety of both applications and methods. I think additional English language review is needed to make the manuscript more readable.

Authors' Response 1

Thank you. Thorough language editing has been made.

I suggest to accept except serval Speaking problems. The topic is clear and the conclusion is novelly. But the case study is too long. I recommend publication of this review article in World journal of diabetes. Thank you.
