Dear Sir

**Manuscript number 28976 - Endoscopic assessment and management of sporadic duodenal adenoma.**

Thank you very much for your review of our paper. We have revised the paper in line with the reviewers comments. Specifically we have undertaken the following changes.

1. The paper has been retitled 'Endoscopic assessment and management of sporadic duodenal adenoma: the results of single centre multi-disciplinary management'. This makes the title more specific and indicates the single centre origin of the data.
2. The indications for upper GI endoscopy (page 6, line 13) have been clarified as well as the use of biopsy (page 6, line 14). Referenced comment had been made at the end of the second paragraph on page 6 regarding the use of endoscopic ultrasound.
3. In the final paragraph on page 6 we have provided more detail around the performance of endoscopic interventions. On page 7 the end of paragraph one, the use of endoscopic en bloc resection has been clarified. We have

added a further paragraph on line 12 page 7 regarding pathological management of endoscopic specimens.

We would like to thank the reviewers for their kind comments and we believe that the paper is now stronger and we would be very grateful if it could be considered for publication in the World Journal of Gastrointestinal Endoscopy.

Kind regards

Yours sincerely

Jonathan Koea MD FACS FRACS  
Hepatobiliary and General Surgeon
