Dear Editorial Staff,

I am writing this letter to inform that I have reviewed statistical methods and results described in Dr. Abuodeh's research manuscript titled with "**Prognostic value of pre-treatment F-18-FDG PET-CT in patients with hepatocellular carcinoma undergoing radioembolization**".

The statistical methods used in this retrospective study were appropriate and the statistical techniques were suitable. Data were adequately analyzed considering statistical distributions and characteristics of study variables.

If you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads "Kim Youngchul".

Youngchul Kim, PhD
