Consultant Radiologist

8th December 2016

Dear Editor,

Title: Computed Tomography Pulmonary Angiography (CTPA) using a 20%
Reduction in Contrast Medium Dose Delivered In a Multiphasic Injection

Authors: Mitchell Chen, Gaith Mattar, Jamal A. Abdulkarim

Name of Journal: World Journal of Radiology

ESPS Manuscript NO: 30491

In this manuscript, statistical analyses were performed using Microsoft Excel 2010 (Microsoft Corp, USA). Categorical variables (gender, number of rejected scans) were analysed using the chi-square test. The correlation between weight and age with opacification was analysed with Pearson's correlation coefficient. General linear model analysis of variance (GLM) was performed to investigate the association between demographic variables and difference in attenuation. All statistical tests were conducted at a significance level of $p < 0.05$.

Here I confirm that the statistical analyses of this study are performed in an appropriate manner. If you have any question concerning the statistical analyses, please do not hesitate to contact me.

Yours sincerely,

Regards,

Jamal Ali Abdulkarim
