

## **RESPONSE TO REVIEWERS COMMENTS**

10<sup>th</sup> November 2016

Dear Editor,

**ESPS Manuscript NO: 19382**

**Title: Lower Limb Intracast Pressures Generated By Different Types of Immobilization Casts**

Thank you for your evaluation of the manuscript and for inviting us to address the reviewers comments.

- Revisit one sentence in the Abstract-conclusions; "Splitting the fiberglass casts..." The study used Surrogate Parameter, so this Statement is not entirely covered by the results. I propose to rephrase (Data indicate.... pain relief...) **This sentence is no longer in the abstract-conclusions.**
- But I found a similar sentence in the Comments- Innovations and breakthroughs and I have changed the sentence, which now reads- **'Our data indicates that split fiberglass casts were associated with significantly less pain than complete fiberglass casts.'**

Thank you for your time in considering this manuscript. We look forward to hearing from you.

Yours sincerely
