

31295-Answering reviewers

Dear Reviewers,

I should like to thank you in advance for your valuable comments and times that have spent for upgrading my manuscript level and correcting my errors in my manuscript.

I tried to fulfill all of your suggestions in my revised manuscript.

I offered my manuscript to Dr. M.B. Rafi, Professor of Neurology at Thomas Jefferson University, Philadelphia PA, USA for my manuscript editing, I have thanked him in my acknowledgment section.

I corrected Micro-organism names to the form of scientific format (italic font); I also have eliminated some parts that were redundant.

I corrected it as the style of journal, as reviewer had asked me. References were added with full co-authors name and PMID and DOI numbers manually subsequent Endnote correction.

I added “core tip” and “Audio Core tip” in the format that reviewer had asked me. I have added it as a written part for its checking by my reviewers; You can delete its written part from my manuscript.

I changed main title and running title size to the size that has been requested. I noticed some Authors have entered first Author name in the beginning of running title in your manuscript format, I asked about its necessity from WJG journal office they told it is not necessary. I could enter my name in its beginning, but their message prevented me from it.

There is not any conflict of interest between Authors.

There is not any funding for supporting our research.

We had tried to repeat siyavoshi F experiment in our lab, Due to its essential detail information deficiency in its materials and methods, we faced with great problems, we are trying to reflect those problems to our other colleagues as a “letter to editor”, and we hope it corrects other colleague imagination from the matter. These non-written details act as lost essential puzzle particles and impel researchers to a wrong imagination from “real event” (puzzle full picture). What is the Genus and species of defined yeast/Amoeba? Do all yeasts ingest *Helicobacter* toward their inside? Do Koch

pustules confirm this hypothesis? Is IgY "Egg Yolk Ig" as suitable tool as *H.pylori* positive patients IgG for its follow upping? Have *Helicobacter* magic ability to pass through thick yeast cell wall? Is attraction of *Helicobacter* is due to its tropism to yeast extract?

Does *Helicobacter* infect yeast cells similar to a virus by injecting its Nucleic acid? Or as intracellular Bacteria enter to host cell and propagate in it? Or co-live symbiotically with it? Or some things different than their imagination occur? How much roles "*Acanthamoeba* can have in this imagination? Do our imaginations overlap with basic science?

I think our manuscript will illuminate other researchers for correct imagination of the event. A lot of researches are required till its detail complete illumination.

I should like to thank you in advance again for your helps in publishing my manuscript.

I congratulate you new year and wish you happy, peaceful,successful new year 2017.

Thanks For your kind helps.

Dr.Nader-Alipour(PhD)

Dr.Nasrin Gaeini(MD)
