

Dear Reviewer n. 03549092,

Thank you so much for your opinion about my Case Report. As regards consideration about the few articles cited, you're right but literature about *R. Ornithinolytica* is mainly about bacteremia and the clinical features and outcomes of human infections have been reported for only a limited number of cases.

Dear Reviewer n. 00724363,

First of all, let me thank you for the opportunity to reconsider my Case Report, according to your valuable suggestions.

1. English language: I have provided to correct it.
2. Name of bacteria: I have rewritten all scientific name of bacteria in Italic.
3. Treatment: as regards the antimicrobial treatment, it was decided by Infectivologist so I have just reported the therapy he had suggested and prescribed but, according to your comments, I've modify the table too, by reporting just the antibiotics the patient took for *Raoultella* and *Klebsiella*.
4. I've also diminished the number of images, as you suggested.

Dear Reviewer n. 00289569,

Thank you for your consideration: I've provided to correct the language of the article.

Dear Reviewer n. 00646271,

Thank you very much.

Best regards,

Dr. Marianna Luongo, M.D.
