Project Title: Is dengue emerging as important cause of acute liver failure in endemic regions?

Principal Investigator: Lavleen Singh, Amitabh Singh, Mitali Agarwal and Sataroopa Mishra
Faculty Advisor Dr. Lavleen Singh Department of Pathology Chacha Nehru Bal Chikitsalaya Geeta Colony, Delhi-31, India

What the study is about

The purpose of this research is to report the cause of fulminant hepatic failure in an infant.

Sponsors- none

Type of study- case report

Status of review- approved

Clinical trial- no

Number of subject-1

Type of subject- pediatric

Study involves- Human tissue sample

Confidential handling of data by staff- yes

Risks and discomforts

We do not anticipate any risks from participating in this research.

Benefits

We will be able to highlight the dengue as a cause of fulminant hepatic failure in children, which will benefit others in being recognized early for this possible complication.

Cost of participating none

Payment for participation None

Use of Tissue Samples/DNA for Future Studies NA

Special Considerations

Patient or participant will not receive any financial or proprietary interest in the samples or in any products or processes that may result from research on the samples.

Privacy/Confidentiality

All attempt to hide patient's identity during publication will be taken up by the authors.

You will be given a copy of this form to keep for your records.

Statement of Consent

I have read the above information, and have received answers to any questions I asked. I consent to take part in the study.
