COMMENTS TO AUTHORS

Thanks for submitting this case report with sufficient follow up to WJO. Please add laboratory values of nutrition (albumin, ferritin, WCC) if available for this patient to substantiate your diagnosis of malnutrition and state if the patient was fed through a NG tube and for how long. Best wishes

COMMENTS TO AUTHORS

Text well wrote and easily comprehensible with clear figures, nevertheless some modifications and corrections will be desirable to reconsider final work: 1- Radiological findings: +The figure 2 can be deleted cause the figure 3 shows the fistula + The figure 4 isn't good image (To remove) 2- At the beginning, what's the indication of double approach? (Laminectomy and anterior approach) 3- Is there a risk of osteitis (Bone graft)? 4- summarise in the table the cases reported in the literature to compare the indications of conservative treatment used by the authors and surgery performed by some cited in references.
