

Point-by-point response

Reviewer 1

COMMENTS TO AUTHORS

Reviewer: No particular comment, well written case, interesting. Waiting for results of the prospective trial undergoing at Naples Institute

Authors: We thank this reviewer that prompted us to publish this case report. As he/she pointed out prospective evaluation of circulating lymphocytes and “immunoscores” will be the object of a further more extensive work.

Reviewer 2

COMMENTS TO AUTHORS

Reviewer: you should include more cases

Authors: We agree with this reviewer that the relevance of our results might be improved by inclusion of more cases. However, please, the predominant aim of this case report is descriptive and the most important characteristic is the long-lasting response to panitumumab monotherapy. Data and results on more cases will be the object of a further work including speculations and mechanistic hypotheses.
