9

10 **Abstract**

11 **Purpose:** Langerhans cell histiocytosis is a rare condition mostly seen in children and  
 12 adolescents. Eosinophilic granuloma is one of its three clinical entities and is  
 13 considered as a benign osteolytic lesion. Many reports of patients with spine  
 14 histiocytosis are well documented in the literature but it is not the case of atlantoaxial  
 15 localization.
