## COMMENTS TO AUTHORS

The author reviewed gallbladder cancer (GC), especially regarding molecular genetics. They have referred to vast amounts of articles for more information about GC. The data may be use for clue to the solution. This is well written, interesting and useful, which I think is suitable for publication in World Journal of Gastroenterology.

## COMMENTS TO AUTHORS

The authors set out to perform a comprehensive review of the topic of gallbladder cancer. However, sentinel publications on the aetiology and carcinogenesis have been overlooked, eg. The role of gallstones: Shrikhande and company, Eur J Surg Oncol The role of hormone receptors: Shukla PJ and team, Barreto and Shukla The Gallbladder Carcinogenesis model of Barreto and Chaudhary The role of non-typhoidal salmonella by Iyer and team. Simply listing genetic mutations adds nothing to the existing literature. What is the rationale of this study? What does this study add to the existing literature? These questions remain unanswered at the end of the manuscript.

## COMMENTS TO AUTHORS

This review deals with epidemiology, pathogenesis and molecular genetics about gallbladder cancer. This review especially included a recent update regarding molecular genetics of gallbladder cancer. This paper will be helpful and useful for readers who want to know current status and new findings about molecular genetics of gallbladder cancer. The presented article by Dr. Duarte is recommended for publication in WJG.
