**Anti-N-methyl-D-aspartate receptor encephalitis** that aggravates after  
acinetobacter baumannii pneumonia: A case report

Cheng C Wang, Da J Li, Yi Q Xia, Kai Liu

**Abstract**

We report an atypical case of anti-N-methyl-D-aspartate receptor encephalitis (ANMDARE). A 27-year-old man diagnosed with ANMDARE received immunotherapy and had a good recovery. However, within one month, he developed severe status epilepticus and decreased level of conscience with new hyperpyrexia and dyspnea, and was admitted to the emergency intensive care unit. Acinetobacter baumannii were found in the sputum culture;

## Match Overview
