**Title:** Successful treatment of a pancreatic schwannoma by spleen-preserving distal pancreatectomy

Dear editor and reviewers:

Thank you for your contribution and your careful consideration for our manuscript. We also thank you for your each suggestion for this paper. According to the comments from the reviewers, we have made responses and revisions. All the changes were marked in the revised manuscript with red color.

**Response to Reviewer #1 (Reviewer's code: 02823555)**

Thank you for your suggestions. According to your suggestions, we have revised our manuscript. We can not found another pancreatic schwannoma in our hospital records except that the ones have been reported. Only one case of pancreatic schwannoma was treated using minimally invasive laparoscopic surgery (1.47%). Enucleation has been reported in 10 cases (14.71%). Patients treated with minimally invasive surgery might have less pain and faster recovery. (Page8, line2-5) Thank you again for your contribution.

**Response to Reviewer #2 (Reviewer's code: 02445561)**

Thank you for your contribution.

Yours

sincerely,

Dr. Weilin Wang
