Critically ill patients and gut motility: Are we addressing it?

Vazquez-Sandoval A *et al.* Critically ill patients and gut motility

Alfredo Vazquez-Sandoval, Shekhar Ghamande, Salim Surani

Abstract

Gastrointestinal (GI) dysmotility is a common problem in the critically ill population. It can be a reflection and an early sign of patient deterioration or it can be an independent cause of morbidity and mortality. GI dysmotility can be divided for clinical purposes on upper GI dysmotility and lower GI dysmotility. Upper GI dysmotility manifests by nausea, feeding intolerance and vomiting; its implications include aspiration into the airway of abdominal contents and underfeeding. Several strategies to prevent and treat
