Transition of pediatric to adult care in inflammatory bowel disease: Is it as easy as 1, 2, 3?

Anita Afzali, Ghassan Wahbeh

### Abstract

Inflammatory bowel disease (IBD) is a heterogeneous group of chronic diseases with a rising prevalence in the pediatric population, and up to 25% of IBD patients are diagnosed before 18 years of age. Adolescents with IBD tend to have more severe and extensive disease and eventually require graduation from pediatric care to adult services. The transition of patients from pediatric to adult gastroenterologists requires careful preparation and coordination, with involvement of all key players to ensure
