Dear Professor Qi,

Please find enclosed the revised version of the Editorial/manuscript entitled **Cyclooxygenase 2 in liver dysfunction and carcinogenesis: Facts and perspectives**, as previously invited from your e-mail dated 20147-01-04, and revised last week.

In this Editorial we review the role of COX-2 and the prostaglandins derived from this enzyme after different liver insults, including HCC. In this revised version, we have incorporated the comments addressed by the Reviewers, as well by the Editor in charge. A point-by-point response is included. We thank all you for these constructive comments that improved the quality of the Editorial.

Awaiting your news with much interest,

I remain

Lisardo Bosca
