COMMENTS TO AUTHORS

This is a well written paper titled : Two-stage surgical treatment for septic non-union of the forearm: retrospective review of 18 patients with 6 years follow-up. The paper presented the 2 stages , -1- but the authors need to give details about the antibiotic cement spacer , what kind of antibiotics used and added to the bone cement -2- the duration and type of antibiotics used for treatment after the first stage -3- did the authors use antibiotics after the second stage surgery ?
