COMMENTS TO AUTHORS

Dear Authors, I read with interest your technical report on balloon-overtube-assisted stenting for treatment of complications after sleeve gastrectomy. As I wrote to the Editor, I would suggest minor changes to the text for better specification of some clinical aspects. I would also like to know if this is an original technique, or if it was already reported in the literature. In any case, on my opinion your article deserves publication for its usefulness for specialists involved in the treatment of these difficult cases.

COMMENTS TO AUTHORS

The most interesting topic of the paper is, in my opinion, the novelty of the technique described. This technique seems easy to perform, in expert hand, and can impact positively on the resolution of serious complications due to laparoscopic sleeve gastrectomy. For all these reasons, we recommend the publication of the paper.
