

## Informed consent statement

---

Dear Editor in Chief of the World Journal of Clinical Cases,

The patient presented in the case report manuscript entitled ***Recurrent aneurysmal bone cyst of talus resulted in tibiotalocalcaneal arthrodesis***, was not required to give informed consent to the study because the analysis used clinical data obtained from his file after follow-up visits of the patient who had been agreed to treatment previously by written consent.

With regards,

Amir Reza Vosoughi  
Orthopedic Foot & Ankle Surgeon  
Department of Orthopedic Surgery
