Endoscopic ultrasound -guided radiofrequency ablation in gastroenterology: New horizons in search

Satyarth Chaudhary, Si-Yu Sun

Abstract

Radiofrequency ablation (RFA) had been widely used for the treatment of various solid organ malignancies, and by surgeons intra-operatively. Over the last decade, endosonographers have gradually shifted the application of RFA from porcine models to humans to treat a spectrum of diseases. RFA is performed in patients with pancreatic carcinoma who are not candidates for surgery. The various indications for RFA, procedural details and complications are discussed in this review. At present,
