COMMENTS TO AUTHORS

Very interesting review. However, there are some language polishing. An native English speaker is needed.

COMMENTS TO AUTHORS

The review is interesting. In this review, the authors provided the details of indications, thermokinetic principles and complications related to radiofrequency ablation, which should be judiciously applied in management of various diseases. 1 Please add figures of EUS. 2 As this review is for a journal in gastroenterology, the review should be revised, and more focus on EUS guided RFA in the diseases of GI/Hepatology/Pancreas. The title also should be revised to focus the scope of the journal. 3 The references have to be updated. Some more important references in 2016 should be discussed. 4 The language should be revised by a native English speaker.

COMMENTS TO AUTHORS

The language should be revised by a native English speaker. Some EUS figures should be added.
