### COMMENTS TO AUTHORS

This is an interesting manuscript dealing with a popular field of revision hip arthroplasty. The authors presented their results of a tantalum acetabular implant in 58 patients requiring revision surgery, which is a significant advantage of the study. They were able to show non-inferior results even in big bone defects of the acetabular rim. Data is presented in a statistically comprehensive way. Also limitations are carefully addressed. However, two points have to be made prior to considering the manuscript for publication: 1. Several language deficiencies are obvious throughout the manuscript - I have outlined some of them in the manuscript-review attached. An English speaker should go through the paper! 2. Radiographs of successful surgical cases should be included - at least one major bone defect before and after revision. Also a difference between a radiolucent line and gap could be made more comprehensive by including x-rays.
