Laparoscopic resection of gastrointestinal stromal tumors (GISTs): Does laparoscopic surgery provide an adequate oncologic resection?

Joseph J Kim, Lim Y James, Scott Q Nguyen

Abstract

AIM: Gastrointestinal stromal tumors (GISTs) are rare tumors of the GI tract. Surgical resection remains the mainstay of non-metastatic disease. However, the ability to provide an adequate oncologic resection using laparoscopic surgery is still an area of debate.

METHODS: A thorough review of the current literature, looking particularly at the use of laparoscopic surgery for larger GISTs and the long-term oncologic outcomes and
