ESPS Manuscript NO: 33211

Title: Ultrasound diagnosis of fractures in mass casualty incidents

Dear Editor:

Thank you for your kind positive response and asking us to revise the above manuscript. The manuscript has now been re-written as advised by the reviewers. We thank the reviewers for their highly encouraging and useful comments which have helped us to improve the manuscript.

Reviewer 1 (number 03516193)

Comment: This is very interesting and a good diagnostic modality in austere conditions.

Answer: I thank the reviewer for his/her highly encouraging comment. Nothing to answer.

Reviewer 2 (number 03069247)

Comment: Excellent article. I think that it will be better if Figure 3 (A, B, and C) all to be together. The same for Figure 4 (A, B, C). Figure 5 can be removed.

Answer: I thank the reviewer for his/her highly encouraging comment

- a) The three sections of Figure 3 were combined as requested by the reviewer.
- b) The three sections of Figure 4 were combined as requested by the reviewer.
- c) Figure 5 was deleted as requested by the reviewer.

Thank you for your consideration for this manuscript and I hope that it will finally find a place in your reputable journal.

Yours sincerely
Fikri M. Abu-Zidan,
