COMMENTS TO AUTHORS

Authours report an interesting case of 3-yo child with ES associated with type 1 AIH. I have only minor comments. Case presentation, first paragraph, line 6: "viral panels were negative" - specify which viral panel was performed. ANA were positive: any specific pattern at immunofluorescence? If so please report. The biopsy report needs to be clarified. After mild cholestatic there is a bracket including different kind of damages such as interface hepatitis. This is an independent damage not related to cholestasis. Please correct this. Needs to be clarified at which month of follow up is the patient currently. The current treatment regimen needs to be clarified: is it oral steroids, Azathioprine, Rituximab? The liver biopsy was performed percutaneously or transjugular? I found it brave to perform a percutaneous biopsy in a fragile patient like her. There is no mention of platelet count, needs of platelet transfusion. Also INR was normal? Please report the platelet count and INR at admission when she was biopsied. Needs revision of punctuation.

COMMENTS TO AUTHORS

Major concerns: 1. Abstract. There is no need for detailed examples of extrahepatic autoimmune disorders in this section. 2. Where and when was the patient treated? 3. Figures 1 and 2. The patient is supposed to have received multiple blood test at each time point. What is the criteria for selection of a single reading among those?

COMMENTS TO AUTHORS

Sincerely hope the authors indicate whether you got a signed informed consent Form from the parents of the patient and the first date you assessed the patient.
