Management of ventricular tachycardia storm in patients with structural heart disease

Daniele Muser, Pasquale Santangeli, Jackson J Liang

Abstract

Electrical storm (ES) is a medical emergency characterized by repetitive episodes of sustained ventricular arrhythmias (VAs) in a limited amount of time (at least 3 within a 24-hours period) leading to repeated appropriate implantable cardioverter defibrillator (ICD) therapies. The occurrence of ES represents a major turning point in the natural history of patients with
