

Dear Editor-in-Chief,

We are submitting a revised version of our manuscript entitled “Vascular complications of Transcatheter Aortic Valve Replacement; A concise literature review”.

Thanks for the nice comments by the reviewers.

Here are the answers to the queries by reviewer 1.

**The manuscript focuses on TAVR by Dr Muhammad Rizwan Sardar et al. is very interesting and useful to the field. But I still have some concerns. 1. Please add more complications about TAVR. 2. There are a few grammar errors should be corrected. 3. Please add the two citations: Antithrombin III/SerpinC1 insufficiency exacerbates renal ischemia/reperfusion injury. *Kidney Int.* 2015 Oct; 88(4):796-803. Clinical survey on contrast-induced nephropathy after coronary angiography. *Ren Fail.* 2013 Oct; 35(9):1255-9.**

In this review, the emphasis is only on vascular complications and we have included all possible vascular complication details with technical considerations and management strategies.

I would gladly add the two citations mentioned but they are both related to acute kidney injury and contrast induced nephropathy which is not the theme of the article.

The grammatical errors have been corrected.

Please let us know if any further changes are needed.

Thanks and best regards

Drs Chaudhry and Sardar.
