COMMENTS TO AUTHORS

The manuscript reports the results of studies on transitional care from pediatric to adult gastroenterologist in inflammatory bowel disease as experienced in Quebec, Canada. The study was conducted by assessment of the survey among 136 health care professionals involved in caring for IBD patients. The findings revealed that the pediatric patients were inadequately prepared for the transition, thus indicating the importance of an educational program for young adults with IBD. This is a reasonable paper, well written, and although not that scientific could offer a reasonable reading to those dealing with the health system similar to that in Quebec.

COMMENTS TO AUTHORS

Transition programs to support pediatric patients who are getting ready to transition to adult healthcare are not frequently used in hospitals. In the presented article the authors aimed to determine the tools needed and problems encountered the transition of IBD patients from pediatric to adult gastroenterologist. Although the percentage of respondents is low, the majority of them believed that a standardized structure is important for a successful transition. The article needs minor language polishing: Introduction, 3.paragraph, the first sentence; Their remains.. must be "There remain or It remains"?

COMMENTS TO AUTHORS

This is an interesting study regarding transition program to support pediatric patients. Despite the percentage of respondents is low, the majority of them believed that a standardized structure is important for a successful transition. This study hint the successful transition may be applied to other world, especially in the Asia with increasing rates of IBD.
