### COMMENTS TO AUTHORS

DeSimone et al presented a review article. I red the article and decided that this is an well written article and well summarized the literature. I think the authros can do a contrubution to literature with this manuscript.

**COMMENTS TO AUTHORS**

This is a very comprehensive review on the complications of Lumen Apposing Metal Stents (LAMS) in the management of pancreatic fluid collections. The manuscript is very well written. The authors have done a commendable job in gathering the data on complications. They have also included the results of ongoing trial by the Florida Hospital group. However, in the chart i did not see it mentioned. If possible discuss separately use of LAMS in pancreatic pseudocysts and walled off necrosis as the latter also needs direct endoscopic necrosectomy. Finally there is a large study from India (Lakhtakia et al. ) which should also be discussed as they used an algorithm which was very helpful in increasing the clinical success and minimizing adverse events. Overall, I believe the review article should be accepted for publication.

### COMMENTS TO AUTHORS

This manuscript is a concise and comprehensive good description of the state of art about the complication of lumen apposing metal stents (LAMS) for pancreatic fluid collections.

### COMMENTS TO AUTHORS

The authors must be congratulated on this fairly comprehensive review of LAMs for PFCs and WOPN in acute pancreatitis. I would suggest that the following issues may also be covered: 1. Failure to deploy rates - What is the percentage of cases where the deployment of the stent failed 2. All cases of PFCs/WOPN are not amenable to endoscopic approach and as such would preclude LAMS in such cases. this aspect should be covered in the review.
