COMMENTS TO AUTHORS

Minor comments In the section Introduction (text), Inflammatory Bowel Diseases should be shortened as IBDs In the section Introduction, the first time that the authors reported TNF should explain "Tumor Necrosis Factor". The same for NSAIDs, DMARD.....and all acronyms in the text. To better explain the reason of a common treatment in rheumatology and in gastroenterology, for ES, the authors should highlight the existence of commons pathways linking conditions as spondyloarthritis with IBDs. An updated review with prevalent hypothesis has been recently published by Actis et al. Minerva Med 2016;107:401-12. This concept should be reported in a sentence in the section Introduction. Main comment Among patients with ES in treatment with anti-TNF-alfa there were those with IBD in remission. In the figure 1 the authors report "used as recommended for IBD treatment". Please, could the authors specify better this issue in the section materials and methods?
