COMMENTS TO AUTHORS

I read with great interest the manuscript by Dr. Ayman Qasrawi et al. entitled "BRAF V600Q-Mutated Lung Adenocarcinoma with Duodenal Metastasis and Extreme Leukocytosis". This case report with a literature review reports on a patient with BRAF-mutated lung adenocarcinoma presenting with a lytic bone lesion, duodenal metastasis and unexplained extreme leukocytosis. The object is interesting and the manuscript clearly reported. This is the second well-documented case of gastrointestinal metastasis from BRAF-mutated lung cancer. Below, I report some minor comments 1) Please note that the abstract and the core tip are not complementary. The main issues should be presented in both. For instance, the literature search has been not cited in the abstract. Please revise them accordingly. 2) Please specify whether the FOBT was based on immunological test or guaiac, since these two tests have a different sensitivity for upper GI bleedings. 3) Please note that in the figure 2 legend there is a typing error (finished)

COMMENTS TO AUTHORS

-Why did she initially undergo arthotomy instead of CT scans? -4th line, 2nd paragraph of Case Report: comma after "started". -Would it be possible to summarize Case report? You can delete "Other electrolytes, kidney function, and liver enzymes..." or "given intermittent melena and positive stool for blood".
