Ophthalmic manifestations in patients with inflammatory bowel disease: A review

Leandro Lopes Troncoso, Ana Luiza Biancardi, Haroldo Vieira de Moraes Jr, Cyrla Zaltman

Abstract

Clinical manifestations of inflammatory bowel disease (IBD) are not locally restricted to the gastrointestinal tract, and a significant portion of patients have involvement of other organs and systems. The visual system is one of the most frequently affected, mainly by inflammatory disorders such as episcleritis, uveitis, and scleritis. A critical review of available literature concerning the ocular involvement in IBD, as it appears in PubMed, was performed.
