Reviewer 1: 00058381

Thank you for your review and constructive comments. The manuscript has been edited as per your advice and have been “tracked” with the track changes function.

- Page 4, Paragraph 3 – Edited to hyphenate “ischaemia-reperfusion” injury
- Page 7, paragraph 5 – The spelling error was corrected to *Staphylococcus*
- Page 7, paragraph 6 – The sentence has been edited to clarify the point.
- Figure legend 1 – Removal of plural form of “transplantation”
- Figures 6 – 16 – Documented “arrows” in brackets next to the findings arrows are pointing to

Reviewer 2: 02346872

Thank you for your review and constructive comments. The manuscript is a comprehensive review of the imaging features of post lung transplantations complications that can occur. The intrathoracic complications were categorised into early and late complications for reading ease. It is crucial for radiologists to identify various signs of complications on imaging to ensure appropriate treatments are given.
