### Statistic review comments

**Manuscript title:** An improved experimental model of cystic hydatid disease in liver resembling natural infection route with stable growing dynamics and immune reaction

**Authors:** Ruiqing Zhang, Xinhua Chen, Hao Wen

The study design fully considered the realities of biological complexity. The authors provide big sample size for reasonable quantifying results. The in-vivo experiments followed the basic statistic principles and guidelines. The components of the study such as effect size, was set up in a solid frame with follow-up time and regular routine check-up manpower. It lend themselves to straightforward interpretations.
