COMMENTS TO AUTHORS

Major Comment: Interesting overview. Minor Comment: Revision recommended; e.g., clauvulanate > clavulanate (page 7, second paragraph); it prescribed for trichomonal vaginitis > it was prescribed for trichomonal vaginitis (page 7, third paragraph); pencillin > penicillin (page 7, last paragraph); clauvulanic acid > clavulanic acid (page 8, second paragraph and page 11, last paragraph); poloymorphonuclear cells > polymorphonuclear cells (page 10, first paragraph); supress endogenous organisms > suppress endogenous organisms (page 12, second paragraph); non-absorable antibiotics > non-absorbable antibiotics (page 15, third paragraph).

COMMENTS TO AUTHORS

The article was a very well collected data pool about preoperative antibiotic profilaxis possibilities, the Authors detailed many antibiotic combination. I hoped, finally I will know the correct answer how to do it, but the conclusion was not clear, there was no clear evidence what and how should we use and combine drugs. Therefore I advice to the Author that they should explain -considering their local protocols as well- and give a suggestion for best supportive care. Following this small correction, I accept.
