COMMENTS TO AUTHORS

Very well written study on a subject that few physicians take note of. The burden that IBD has on patients is well known for whoever treats these patients on a regular basis. Adding the stress of the surgical procedure to the already complex mental status of these patients can have a significant impact on patients lives. I commend the authors for a job well done !

COMMENTS TO AUTHORS

Please comment (discussion section) on the necessity to examine in future studies the psychiatric status of the same group of patients with IBD before and after the surgical intervention, in order the results to be more representative.

COMMENTS TO AUTHORS

To the authors, General comments 1. I am afraid you have not read the instruction for the author! Please, make corrections at the References. 2. There are too many grammar/spelling errors throughout the text. Please, make corrections. Major concerns. 1. Abstract. It is confusing and should be rewritten. If the aim of your review was "to examine if patients with IBD have higher risk of psychiatric comorbidities after surgery compared with no IBD patients you should mention in the results how many of patients with diverticulitis, inghinal hernia or cancer were included in no IBD group. Conclusion should be drawn more precisely, and refer to the aim of the review. Pay attention to t Crohn's disease!! 2. Core-tip is lacking. 3. Key words is lacking. 4. Introduction. Page 3, 3rd paragraph should be rewritten Last paragraph is rather confusing: "the objective of this review was to examine..." ..."this review assessed the

following study questions.."! 5. Methods, Page 4: Inclusion criteria, last line "studies in all languages" (impossible!) Page 5,6: Please, give some details regarding study qualities assessment and publication bias (Egger's test, funnel plot?) Important: statistical analysis is lacking; please, write it. 6. Results: First paragraph:"risk of bias was assessed using NOS" (!) (NOS is for quality assessment!) Outcomes (!) regarding depression/anxiety are confusing, difficult to be followed by the readers of the journal. Crohn's disease. Please take attention how to write Crohn's disease!!! 7.Discussion. Page 10: rewrite first sentence , second paragraph "looking at patients...we only found results looking..."!! Page 11, the last three lines ("chicken or egg dilemma") should be deleted. 8.Conclusion. Page 12. I agree with the first sentence . Key points: Charlson 's comorbidity instead of Carlson. I regret I cannot recommend your manuscript to be published until a major revision dealing with the above mentioned comments is made.
