## COMMENTS TO AUTHORS

In the case report named „Deanxit Relieves Symptoms in a Patient with Jackhammer Esophagus: a case report“ written by Jinying Li, Wenhuan Zhang, Chunling Huang, Dang Huang, Guowen Zuo and Liexin Liang authors have described their good experience with Deanxit in the patient with oesophagus motility disorder. Deanxit (Flupentixol + Melitracen) Tablet is an antipsychotic and tricyclic antidepressant combination, which has been produced in Denmark, and distributed worldwide. However, it was banned in the USA, the UK, Australia, Canada, Japan and Ireland, and in the country of origin, i.e. Denmark, too. This is due to the side effects. One of side effects is a habit forming. It has severe withdrawal symptoms, and does not allow easy withdrawal. It may be suitable and thus recommended for the patients presenting with both disorders, psychiatric disease and esophagus motility disorder. Therefore, one

should be careful when recommending it for persons who do not have psychiatric disorder, because they may side effects which are serious. Despite good results were obtained in one patient, authors can't conclude that deanxit is a promising medical treatment that can improve function and relieve symptoms WITHOUT THE TROUBLESOME SIDE EFFECTS, because of their single patient experience. Deanxit was withdrawn from market because of numerous side effects. It may be the last therapy, after other treatment options mentioned in this article, like botulinum toxin injection, peroral endoscopic myotomy and balloon dilatation, were used. Whether this article will be accepted, this conclusion should be changed. Authors must mention possible side effects if the drug combination. Minor language polishing is needed, too.

## COMMENTS TO AUTHORS

In this paper the Authors analyze the effectiveness and feasibility of administration of Deanxit in a Patient with Jackhammer Esophagus. A comprehensive and extensive literature review of the NCBI database PubMed was also carried out. The article was well conducted and it is interesting in its fields. It is a well-structured paper, written in good English and the References are up dated. In my opinion is suitable for publication in its present form

## COMMENTS TO AUTHORS

The author reported a case of hypercontractile esophagus diagnosed by high-resolution esophageal manometry. The patient's refractory symptom of dysphagia was relieved by Deanxit. This is a rare reported situation. However, here are two circumstances need to be clarified. First of all, this patient overlapped with Barrett esophagus and depression. Symptoms such as chest pain and heartburn relieved when adjust regimen. Deanxit is an anti-depressive agent, how did you exclude somatization disorders caused by depression? The patient withdraw Deanxit, did he have another evaluation of his depression by psychologist? Secondly, language of the manuscript need to be polished.
