Supplementary Figure 1. ROC curves of APRI and FIB-4 scores in 69 Chronic Hepatitis C patients from Pernambuco/ Brazil. Receiver Operating Characteristic (ROC) curve of APRI score to predict significant fibrosis with area under ROC curve (AUROC) = 0.79 (95% CI: 0.68 - 0.90) (A); ROC curve of FIB-4 score to predict advanced fibrosis with AUROC = 0.84 (95% CI: 0.74 - 0.95) (B); ROC curve of APRI score to predict cirrhosis with AUROC = 0.76 (95% CI: 0.61 - 0.91) (C).
