### COMMENTS TO AUTHORS

This is a well-presented case report of a HIV positive person who had immunosuppression due to her HIV infection, and who presented with esophageal candidiasis and chronic active gastritis, and was found to have after treatment failure, gastric Mucormycosis. I think the case report does its job in raising awareness to physicians who treat HIV patients to look out for this type of fungal infection in their patients. The title says this paper is also a literature review, but only presents seven references. I think that this part of the paper is not covered adequately. I think the references are adequate to support the case report but would like to see a more extensive review to name this a literature review.

### COMMENTS TO AUTHORS

A very important case report that should be shared with the scientific community.
