COMMENTS TO AUTHORS

When reading the introduction of this review, it is expected that the authors describe the immune responses that take place in patients with CD of Chinese origin; immune responses that could be different from those described in Caucasian populations and might be involved in the pathogenesis of the disease in the Chinese population. The authors should comment on this issue and add bibliographic data from their home country, if these exist; otherwise, it is not meaningful to refer to the increased incidence of CD observed over the last few years in China. It is surprising that, although the authors refer to the modern aspects regarding the immune abnormalities observed in CD patients, the majority of their bibliographic references are of the previous decade. The summary should be rewritten to include the main conclusions of the review, instead of just wishes and forecasts for the future. The introduction is insufficient to introduce the reader to the topic of the study.
