COMMENTS TO AUTHORS

This is a well written study about CAN. I have some suggestions. 1- Please enrich the abstract section. 2- "Pathogenetic treatment of CAN includes: weight loose, physical exercise as well as the other diseases" (Breast J. 2017 Jun 7. doi: 10.1111/tbj.12838.) and (Surg Laparosc Endosc Percutan Tech. 2017 Jun;(3):154-157. doi: 10.1097/SLE.0000000000000389.) I suggest both of these uptodate studies for the references.

COMMENTS TO AUTHORS

Minor remarks: • Grammar and style should have minor revision. • Some of the references are inadequate and some new should be added. • Technical errors in the text of the manuscript.

COMMENTS TO AUTHORS

COMMENTS BY THE REVIEWER This unusually long manuscript, supported by an extensive survey of the relevant literature, is a well-organized, clearly written and authoritative review. Its subject is clearly related to the Journal's scope. Reading of such an extensive text usually is tiresome, but the authors are commended for writing a clear and sober prose, so that the reader may easily find the sections dealing with any given aspect and extract from them useful information that can be used to support clinical impressions and decisions. It is clearly a reference for the specialist, not a piece of light reading. Even though the text is almost everywhere correct, there are a few typos, which should be eliminated in a revised version. (such as "authors does not have any conflict-of-interest"; "Antiseptive apo B oligonucleotide (mipomersen)" versus "Antisense apolipoprotein B oligonucleotide (mipomersen)"; and a few others. Otherwise, it is well structured and carefully lists the relevant scientific literature

following the Baishideng Publishers format, which is an achievement with such a long reference list.

COMMENTS TO AUTHORS

The review on CAN discussing its risk factors, diagnosis and treatment is an extensive report that covers a great breadth of this field. The authors support the information in the cited studies with numerous tables to help summarize the findings from multiple studies, which is a great strength of this report. While I feel that some areas of this review could be reduced in length, overall the review is extensive and of value to this field. That being said, there are some areas the authors should address to improve its quality: 1) There are numerous wording and grammatical errors throughout that should be corrected. This is very obvious in the abstract as there are places where words like "and" are missing and where "heard" is used instead of "heart". Please proofread entire review carefully to rectify these issues. This was the major concern I had with the manuscript. 2) In table 3 the left and right columns should be defined similar to how the other tables define columns. 3) HbA1c is used without being defined

on initial usage, but is later defined. This should be corrected. 4) There are font size inconsistencies in the abbreviation list, which should be fixed.
