COMMENTS TO AUTHORS

The paper is a review regarding the present knowledge about a relatively new disease, IgG4-related kidney disease. The paper is well organized in sections about pathology, histopathology, pathophysiological, diagnostic and therapeutic aspects. The paper is easy to read and gives good updated information about the disease. Table and figures are relevant. The literature list covers the scientific field satisfactorily.

COMMENTS TO AUTHORS

1. Title: To write in full form of "IgG4" 2. The abstract needs to be written in a more standard format. 3.   The whole manuscript has dealt with the subject in extensive detail, but could be reduced in size significantly making it easily readable. The current word count is 4580, excluding abstract, core tip, references, tables and diagram. This should be limited to 3000, which will make the reading interesting less tiring for the readers. 4. Each section needs to reformatted as there are several single sentences which mak a subsection.   5. Some histology slides to illustrate the lesions would be necessary in a review of this magnitude.

COMMENTS TO AUTHORS

It is a well written review paper on IgG4-related disease, particularly IgG4- related Kidney disease. The authors comprehensively reviewed the pathology, histopathology, pathogenesis , diagnosis and therapy of this disease. The paper is well organized in sections and three tables are relevant and concise. The current version can be accepted for publication.
