Title: Epidemiology, determinants, and management of AIDS cholangiopathy: A review

COMMENTS TO AUTHORS 1

Dear Authors Thank you for this nice study The article is generally well prepared. I have two suggestions: If a couple of pictures of opportunistic infections causing AIDS-related cholangitis are added, it would be better to understand the meaning of the article. Likewise, if possible, a radiologic image (cholangiography, MR, etc.) of the patient with AIDS-associated cholangitis can be added.

Answer: We were not able to find the pictures of opportunistic infections causing AIDS-related cholangitis or ERCP/ MRCP images for AIDS cholangiopathy . We had “Figure 1: Molecular mechanism of HIV cholangiopathy induced by *Cryptosporidium parvum*. “

COMMENTS TO AUTHORS 2

The article entitled “Epidemiology, determinants, and management of AIDS cholangiopathy: A review” is well written by the authors. The author highlight very important issue of AIDS cholangiopathy, its epidemiology, determinants, Etiology and pathogenesis, diagnosis, management, prognosis and complications. In introductory lines, add short information about global efforts for the control HIV including Fast track HIV program and 90-90-90 targets. The paper is well written and well presented. The paper is suited well for publication in WJG after minor revision. Best

Answer: We thank the reviewer. UNAIDS, 90-90-90 targets are added in the introduction section.
