Basic study

Effects of glucagon-like peptide 1 analogs in combination with insulin on myocardial infarct size in rats with type 2 diabetes mellitus

Vladislav A Zykov, Taisiia P Tuchina, Denis A Lebedev, Alina Y Babenko, Elvira V Kuleshova, Elena N Grineva, Alekber A Bayramov, Mikhail M Galagudza, Irina Borisovna Krylova

Abstract

AIM

To evaluate the effects of glucagon-like peptide-1 analogs (GLP-1a) combined with insulin on myocardial ischemia-reperfusion injury in diabetic rats.

METHODS

Type 2 diabetes mellitus (T2DM) was induced in male Wistar rats with streptozotocin (65
