Review Article: Update on current and emergent data on Hepatopulmonary Syndrome

Soulaidopoulos S *et al.* Hepatopulmonary syndrome and cirrhosis

Stergios Soulaidopoulos, Evangelos Cholongitas, George Giannakoulas, Maria Vlachou, Ioannis Goulis

Abstract

Hepatopulmonary syndrome (HPS) is a frequent pulmonary complication of end-stage liver disease characterized by impaired arterial oxygenation induced by intrapulmonary vascular dilatation. Its prevalence ranges from 4% to 47% in patients with cirrhosis due to the different diagnostic criteria applied among different studies. Nitric oxide overproduction and angiogenesis seem to be the hallmarks of a complicated pathogenetic mechanism, leading to intrapulmonary shunting and ventilation-perfusion mismatch. A classification of HPS according to the severity of hypoxemia has
