COMMENTS TO AUTHORS

Comments for ESPS Manuscript NO 37949 This paper is interesting and reasonable. Compared to those similar reviews that have been published previously, however, this paper fails to stand out from the rest. Thus, I could only conclude that this review falls below the Journal's requirements.

COMMENTS TO AUTHORS

The article New insights of Helicobacter pylori host-pathogen interactions: The triangle of virulence factors, epigenetic modifications and non-coding RNAs by Vaziri et al is an interesting review on conditions favouring the development of gastric cancer. References seem to be sufficiently updated.

COMMENTS TO AUTHORS

I'd like to congratulate the authors for this well-written article. It reflects new concepts about h.pylori. I would like to accept this article as it is.

COMMENTS TO AUTHORS

1. The paper needs language polishing. 2. It should also be emphasized shortly, H. pylori is not only associated with gastric carcinonma, but colorectal cancers (Engin et al. World Journal of Gastroenterology, 2015), as well.

COMMENTS TO AUTHORS

This is a well-designed and well-written piece of work, because molecular aspects of Helicobacter Pylori infection are rarely presented in the literature. The most interesting part of this article is information concerning cellular signaling and non-coding RNA in etiology of gastric cancer induced by H. Pylori. This review brings useful information for molecular biologists, gastroenterologists and medicine students. Therefore I recommend this article for publication in World Journal of Gastroenterology.
