COMMENTS TO AUTHORS

I agree with the authors in that this anecdotal experience should be evaluated in more robust manner. Please address possible ethical consideration in the procedure in this manuscript and the process the author experienced or felt during their well-inteded trial.

COMMENTS TO AUTHORS

The authors report the first case of Pressurized IntraPeritoneal Aerosol Chemotheprapy application as neoadjuvant therapy before palliative D2-Gastrectomy combined with liver metastasectomy in a patient with primarily diagnosed and operated Krukenberg tumor. English language should be revised: see for example "Chemotheprapy" in the initial part of the abstract. The authors should describe the results of the abdominal CT-scan as reported by the radiologist, before to conclude metastasis. Could the authors explain why they waited eight weeks after staging laparoscopy before to perform a laparotomy? Is this a protocol? It is unclear how the authors judged the cytoreduction (from ?? to 3 cm)

COMMENTS TO AUTHORS

Comments 1) The paper is well conceived and provides a new important information. The authors should elaborate more on the technique used and perhaps provide the diagrammatic presentation n of the Pressurized IntraPeritoneal Aerosol Chemotheprapy system. 2) The paper requires a carefull linguistic and stylistic revisions, e.g.: a) "This case might contribute to confirm in the future the usefulness of PIPAC procedure as rescue or neoadjuvant, supportive form of therapy in very selected group of patients with KT presentation of gastric cancer - qualified latterly to classic chemotherapy or standard oncologic surgery procedures." This sentence is too long and convoluted; I it should be shortened and simplified b) "poorly cohesive adenocarcinoma" - possibly authors meant poorly differentiated .. c) "After 30 minutes application time, the toxic aerosol is released safely via a Closed....." was
